

Assignment 1: World of Portal 2

The game of my choice is Portal 2. The events take place in the future in certain laboratories where you are trying to escape from each laboratory and survive.

The main game feature is giving the player the ability to make portals using special gun. The portals allow the player to move from one place to another omitting obstacles. The game extensively uses the physics law, introducing different elements as the game progresses: cubes, lasers, turrets, various gels and other elements.

The game is very interesting for the freedom of choice, the player can try to solve puzzles in different and unexpected ways.

The world itself represents a scientific facility which has no humans except yourself and you are accompanied by a robot who has a specific sense of humour and makes the process of playing much more fun.

Through the game you have to use different objects to move to the next room with the ultimate goal of getting out of the facility.
